

# Set Up Bars

## Set Up For Euroscope

---

You may start by downloading bars [here](#)

Note: Before following the steps make sure that you have logged into bars, verified your email and got your API token.

To set up for Euroscope you will first require to download bars plugin for Euroscope. when downloaded it the software will ask you for the file for the plugin of Euroscope. The plugin is not the plugin of your sector file but the plugin of euroscope. To find it you may type this "

C:\Users\name\AppData\Roaming\Euroscope\Plugin" each of us have a different one however they are pretty similar to each other.

Once that is completely when installing it will also ask you where is your Euroscope located which is straight forward.

After that is done you will go back to this folder

"C:\Users\name\AppData\Roaming\Euroscope\Plugin" and find "bars.dll". You will make a copy of that bars.dll and you will place it in the plugin of your sector file. Once that is complete you may now open Euroscope.

Once your euroscope is open press on "Other set" which is located on the top green bar. Then press "Plu-gins". Then you will press "Load" and press on your plugin that you just added. Once this is done press on the bars plugin, then a bit under you should see like the image a the bottom. You will press "Ground Radar display" and then press the two arrows that are pointing to the left side. You will repeat the same step for "Standard ES radar screens". Now you can come online.

Now you should be able to see bars off with a red background at the top right of your Euroscope. You can take it and place it where ever you want. Once you left click on it you can place you API key and set runways for ownership which will allow you to select it. If you press on any holding point of a runway it will appear red.

For more information you can visit the bars website [here](#)!
